INTRODUCTION
The Introduction should introduce the background to the work that has been carried out. It should contain citations to the key literature to support this rationale and should lead to a clearly stated hypothesis or set of objectives. References must be added in the text with superscripts[1].

OBJECTIVE
This should include what the reason behind the study is, or what is being tried to achieve with the study

METHODS
This section should specify exactly what has been done experimentally. Subheadings can be used to differentiate the different methods in this section. Sample size and statistical methods used should be indicated in this section.

RESULTS AND DISCUSSION
Authors should consider how to present their data. There should be sufficient information for the reader to understand, but it is not necessary to write an extensive text to explain all the detail.

Discussion should summarize the observations and attempts to place this data into the context of the existing body of literature and to express opinions about the significance of the work.

CONCLUSION
The conclusions should be based on facts and evidence and should be limited to minimal speculation about the significance of the work.

ACKNOWLEDGEMENTS
Authors should acknowledge any person, or funding agency that has made a significant contribution to the work.

"The authors would like to thank … (Grant no: XXX) for providing financial support to this project".
