

NNR 2025 – WORKSHOPS

Workshop 2: Innovative approaches to treatment and recovery in patients with neglect

Organizer: Elissa Embrechts (elissa.embrechts@uantwerpen.be) Research Group MOVANT, Department of Rehabilitation Sciences and Physiotherapy, Faculty of Medicine and Health Sciences, University of Antwerp, Belgium.

Content: This workshop includes three sessions that explore innovative strategies for addressing spatial neglect after stroke. The first session examines the complex interaction between spatial neglect and postural control, focusing on its impact on mobility and rehabilitation. The second session introduces visual and auditory cueing techniques to improve spatial attention and support independence in daily activities. The third session presents new evidence on combining cognitive training with non-invasive brain stimulation to enhance recovery in visuospatial neglect. By the end of the workshop, participants will have gained insights to apply these multidisciplinary approaches to improve patient outcomes.
